

Agentic engineering

AI-ACCELERATED SOFTWARE SOLUTION DELIVERY

CUSTOM SOFTWARE, UP TO 4X FASTER AND 50–70% CHEAPER WITH AI

We build real-world custom products by orchestrating AI agents across every stage of the development cycle, from discovery to maintenance. Senior engineers own the thinking. AI carries the execution.

THE SHIFT TO AGENTIC ENGINEERING

AI isn't a shortcut or a lower-quality alternative. It's the same engineering, to the same standard, but delivered smarter, faster, and at lower cost.

✓
Phases delivered in 2–2.5 weeks instead of 3–4 — full products built in 6–12 weeks

✓
Up to 8× faster prototyping, with AI built into every stage of the process

✓
Smaller, leaner teams that deliver more

WE'VE BUILT AI INTO EVERY STAGE OF THE PROCESS. NOT TO REPLACE OUR ENGINEERS, BUT TO AMPLIFY THEM

WHY AGENTIC ENGINEERING IS NOT VIBE CODING

Vibe coders hand the keys to AI, while we stay at the wheel.

- ✓ **The senior engineer is in charge.** Humans own scope, architecture, trade-offs, and risk. LLMs generate and agents automate.
- ✓ **Nothing gets generated without the single source of truth** holding the contracts, patterns, proven modules, and quality gates every project runs on.
- ✓ **There is no single leap from idea to product.** Delivery moves through defined stages, each with human sign-off before the next begins.

WHO IS MINDK

AI-ENABLED SOFTWARE PRODUCT
DEVELOPMENT STUDIO

17

years of
cooperation with
our oldest clients

87

senior or mid-
level AI-enabled
engineers

159

end-to-end
software
projects

84%

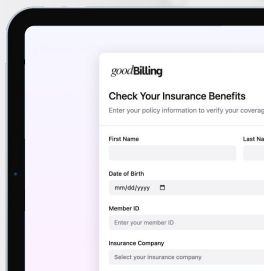

clients have
stayed with us for
over 5 years

We have real-world experience reducing development costs
and accelerating delivery without compromising quality

GOODBILLING

5x cheaper

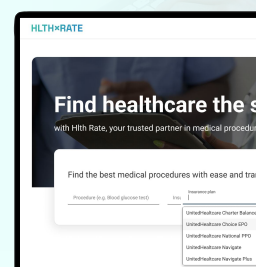

building and scaling of the
RCM platform with
production-ready building
blocks and AI-accelerated
engineering

HLTH RATE

4x faster

time to market by using AI to
automate healthcare data
processing and eliminate
manual pipeline maintenance.

WAYS TO WORK WITH US

FOR FOUNDERS

01

RAPID ZERO-TO-ONE VALIDATION SPRINT

A working product in the market fast. A lean
team of senior engineers plus a full agent
stack ships in 6-12 weeks.

FOR B2B PRODUCT TEAMS

02

AGENT-PAIRED END-TO-END PRODUCT DEVELOPMENT

Proxy PO, Architect, Designer, and Product
Engineers — each paired with its own agent
stack.

FOR AGING SYSTEMS

03

COMPRESSED LEGACY MODERNIZATION

Agents read the codebase, map the
architecture, and run staged migration. Senior
architects own risk and rollback.

FOR COMPANIES TIRED OF LICENSE FEES

04

SAAS SPRAWL REPLACEMENT

Tired of license fees for a 70% fit? AI accelerates
the build of your custom replacement; automated
maintenance keeps it running.

AI ACROSS THE SOFTWARE DEVELOPMENT LIFECYCLE

Stage	What agents do	What humans own	What you gain
PRODUCT DISCOVERY	Capture every workshop into structured action items, functional and non-functional requirements. Scan competitor products, reports, and regulatory sources into cited findings. Convert descriptions into process and journey maps.	Proxy Product Owner defines and validates requirements, sets data mappings and rules, aligns scope to business goals, and decides which market insights actually apply. Solution Architect owns the architecture firsthand.	~30% faster - discovery from 2 weeks
UI / UX DESIGN	Generate UI layouts and multiple interface directions from requirements, wireframes, and brand inputs. Produce rapid prototype variations to test early.	The designer owns usability, accessibility, visual hierarchy, and brand fit — and removes anything that breaks UX patterns or product vision.	Prototypes in days
ENVIRONMENT	Generate infrastructure-as-code, deployment pipelines, security hardening, and monitoring against our standards. Continuously scan for vulnerabilities.	Solution Architect owns the security model, compliance posture, and rollback strategy.	Production-grade foundation from week one
BUILD	Generate features against predefined contracts. Parse runtime logs to pinpoint root causes. Write documentation in sync with the code.	Senior engineers own architecture, business logic, and trade-offs. Every line is reviewed before it ships.	~35% faster - zero unreviewed code
TEST	Generate unit, integration, and edge-case tests against quality gates. Translate acceptance criteria into executable scenarios. Run self-healing tests across browsers.	QA owns release decisions, risk, and validation of complex behavioral scenarios.	~50% faster - 90%+ test coverage
DEPLOY & RUN	Run automated deployments with rollback. Draft release notes. Monitor, debug, and self-heal in production.	Engineers own quality and release sign-off, governance, and final accountability.	~44% faster - low-risk frequent releases
